

Haddon Avenue

Euclid Avenue to Newton Avenue

Preliminary Engineering

Scope of Work

Camden County is currently in Preliminary Engineering & Design for transportation improvements to Haddon Avenue between Euclid Avenue and Newton Avenue. This project is part of a multi-phase plan to upgrade Haddon Avenue. Improvements have been completed on Haddon Avenue in the vicinity of Cooper University Hospital as well as in the vicinity of Our Lady of Lourdes Medical Center. This project will be the next phase, completing the stretch of Haddon Avenue between these important medical facilities. Transportation improvements in this corridor are essential to achieving the long-term vision for a revitalized Haddon Avenue and surrounding neighborhoods.

Key Issues

Identified issues include deteriorated pavement, overrepresentation of pedestrian and bicycle crashes, Americans with Disabilities Act (ADA) deficiencies, and outdated/MUTCD non-compliant traffic signal equipment.

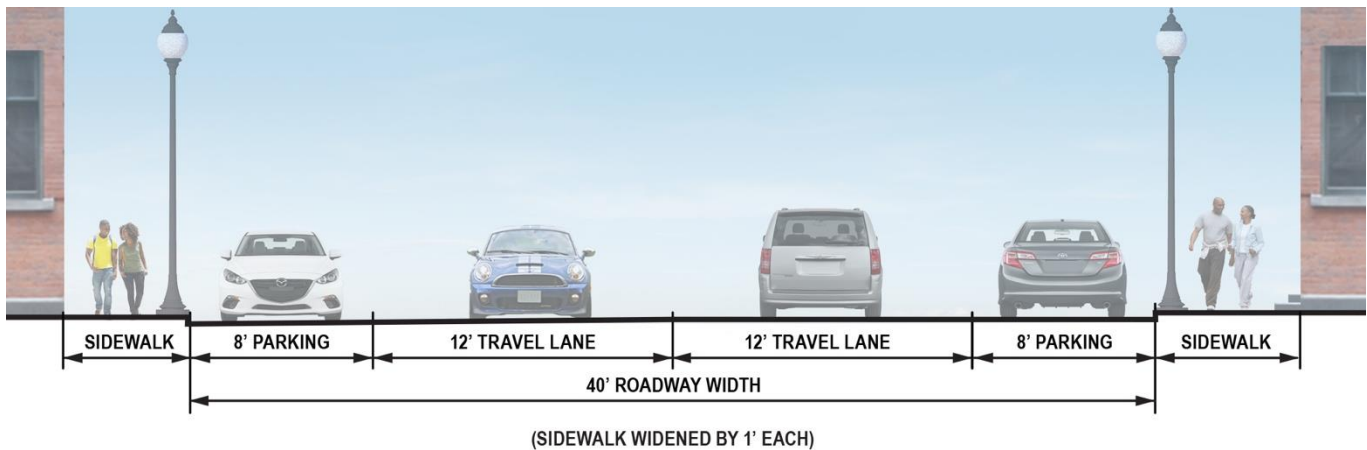

In addition, the obsolete and deficient combined sanitary and storm sewer system will be lined throughout project limits to avoid future roadway openings along any new pavement or impacts to any proposed features.

Goal

The goal of this project is to upgrade Haddon Avenue to make it a “Complete Street”, safely and efficiently accommodating all users including pedestrians, bicyclists, transit users and motorists.

Project Description

The project will provide a roadway cross section consisting of one 12-foot-wide travel lane with adjoining 8-foot-wide parking in each direction. The abutting sidewalks will be widened by approximately one foot to enhance pedestrian flow. Other proposed improvements include pavement reconstruction or overlay; curb extensions at signalized intersections to increase pedestrian visibility and shorten pedestrian crossings; and signal improvements to increase signal visibility, improve traffic flow and enhance pedestrian safety. In addition, the project proposes the replacement of street trees, improved intersection lighting, enhanced transit access and delineation, as well as green stormwater infrastructure (planting areas). For funding purposes, the project will be broken into two construction phases. The first phase to be constructed will extend from Euclid Avenue through Kaighns Avenue. The second phase will extend from Walnut

Street to Newton Avenue.

We want to hear from you!

Camden County would like your input. Your comments can be heard in several convenient ways:

- Complete the comment form at the meeting;
- Email any comments or concerns to: KCullen@CamdenCPinc.com
- Send any comments by mail to: Kathy Cullen
Camden Community Partnership, Inc.
2 Aquarium Loop Drive, Suite 501, Camden, NJ 08103

We ask for any comments by April 19, 2023. Thank you for your interest in this project!

Schedule

Public Information Center.....	Oct 2023
Complete Preliminary Engineering.....	Oct 2023
Complete Final Design.....	Spring 2024
Begin Construction Phase 1.....	Fall 2024
Begin Construction Phase 2.....	TBD
